SUMMARY

Early-career software engineer with 3+ years of combined internship and full-time experience building internal AI infrastructure, distributed simulation platforms, performance-analysis tooling, CI/CD pipelines, and backend applications. Strongest in Python, Linux, automation, and owning engineering systems from deployment to day-to-day operation.

PROFESSIONAL EXPERIENCE

Huawei Technologies Research & Development (UK) Limited

CPU Research Engineer

CPU Architecture Intern

Cambridge, UK

Sep 2025 – Present

Mar 2023 – Sep 2025

- Own the deployment and day-to-day operation of an internal multi-node LLM inference platform using Docker, vLLM, and LiteLLM, covering model serving, load balancing, monitoring, upgrades, troubleshooting, and access through a unified OpenAI-compatible API used across the engineering team.
- Perform CPU microarchitecture performance analysis across benchmark suites and design configurations using IPC, speedup, power, and statistical comparisons; maintain Python tooling that processes 10,000+ simulation outputs, detects missing or anomalous results, compares configurations, and generates automated reports and visualizations.
- Built and operated a 10–20-node Slurm compute cluster with 1,000+ aggregate CPU cores and a Python/gem5 experimentation framework that generates configurations, dispatches large parameter sweeps, tracks failures, and collects outputs for up to 1,000 concurrent simulations.
- Designed and deployed the team's first Jenkins CI workflow, integrating GitLab webhooks and Groovy pipelines for merge-request and commit validation, gem5 builds, simulation stages, artifact collection, scheduled execution, and failure notifications.
- Developed and deployed a Dockerized engineering analytics platform with a FastAPI backend and React dashboard, using background jobs, parallel processing, caching, and REST integrations to automate daily project and operational reporting for the research team.

TECHNICAL SKILLS

Languages: Python, Bash, Java, Scala

Backend & Data: FastAPI, REST APIs, Pandas, NumPy, PostgreSQL, Plotly, Matplotlib

Infrastructure & Systems: Linux, Docker, Docker Compose, Slurm, Jenkins, GitLab CI/CD, Git, gem5, QEMU

AI Infrastructure: vLLM, LiteLLM, distributed inference, model serving

EDUCATION

University of Edinburgh

MSc Computer Science – Merit

Edinburgh, UK

Sep 2024 – Nov 2025

- Dissertation: *Converting Images into a Collection of Shapes with CLIP-Based Perceptual Guidance*.
- Selected results: Computer Graphics 95/100; Programming for Data Science at Scale 93/100; Applied Cloud Programming 87/100.

University of Southampton

BSc Mathematics with Computer Science – Upper Second-Class Honours (2:1)

- Dean's List; final-year project: *Stock Price Prediction with LSTM* (85/100).

Southampton, UK

Sep 2021 – Jul 2024

PUBLICATION

Egocentric Doxastic Logic, *Logic and Logical Philosophy*, 2024
